

## COMPLETE SOLUTIONS FOR HOSPITALITY

Are you looking for an intelligent POS system solution for your hospitality business that can be operated intuitively, increases sales, makes work processes more efficient and simplifies your controlling tasks at the same time? Then you've come to just right

place. Alongside lots of restaurants, hotels, cafés, bars, clubs and discotheques, numerous system caterers have placed their trust in the high-quality Vectron POS systems for many years.

# SECURITY FOR YOUR INVESTMENT

## Professional hardware & software

POS systems from Vectron are extremely robust and function without any problems for many years thanks to the careful choice of high-quality materials. They are ergonomically designed and can be operated intuitively. A splash proof design with smooth surfaces that are easy to clean are other advantages for use in the hospitality sector. The POS software is continuously expanded and quickly adapted to e.g. changes to the law - new

fiscal requirements, information on allergens, nutritional values, etc. Your system thus remains up-to-date over many years thanks to software updates. As non-PC-based systems, Vectron POS systems are perfectly protected against viruses, trojan horses and manipulation and their sensitive POS data is in good hands in the POS system memory - and not stored on a cloud.

# TAILOR-MADE SOLUTIONS

## POS solutions as individual as your business

The user interface on Vectron POS systems is freely configurable and can thus be precisely adapted to your company's requirements and work processes. The flexible software with numerous tried-and-tested hospitality functions can be expanded to an almost limitless extent thanks to programmable script solutions.

customers include: bulk purchase prices, stock warnings if a PLU is running out, order confirmations, collection information via SMS, age verification requests for alcohol sales, weather information or recommendations for suitable products such as an espresso to go with a dessert.

# FLEXIBILITY

## Mixing POS systems & PCs

The powerful POS system software is also available in a version for Windows PCs and tablets. This makes mixed installations consisting of robust proprietary POS systems and PC-based POS systems possible - should a workplace need typical PC functions in addition to POS system functions. Or if you are new to Vectron, test the comprehensive range of possibilities offered by our software on inexpensive PC hardware for a while before switching to the robust professional quality offered by the Vectron systems.

## PERFECTLY NETWORKED

### Connecting to peripheral devices & backoffice software

#### SOFTWARE CONNECTIVITY

Do you want a POS system that harmonises perfectly with your backoffice software? Our systems have tried-and-tested interfaces for connection to relevant programmes used in the sector, ERP systems, hotel management systems and time management systems, etc. This enables efficient work processes and lays the foundations for comprehensive controlling.

For example, you can conveniently carry out PLU or price changes on a PC and send them to all, individual or a group of POS systems. It is just as easy to call up data from the POS systems and you thus have the required data for cashing up or completing POS system reports and comprehensive analyses. The optional journal tool enables you, for example, to filter out suspicious transactions such as receipts with immediate corrections or drinks that have been billed multiple times.

Intelligent networking and well-thought out functions make it possible to easily complete all tasks via the POS system:

- Branch orders (manual or automatic)
- Advance customer orders
- Branch transfers
- Stocktaking
- Customer retention promotions
- Customer and gift cards and much more

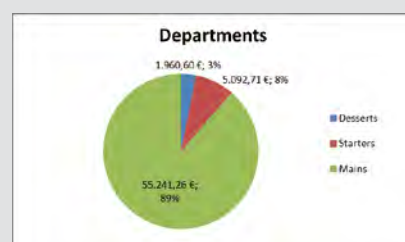

#### HARDWARE CONNECTIVITY

There are numerous interfaces available for connecting up peripheral devices such as printers, drinks dispensing systems, scales, cash management systems, payment terminals (Mifare, Legic, NFC, etc.), customer displays, scanners (e.g. for the sale of retail products or payment via customer cards) and video surveillance systems.

## GRAPHICAL EVALUATIONS

Export the POS system data to Microsoft Excel via an interface in order to create illustrative diagrams and tables of your sales data.

Departments	Start date	Start time	Finish date	Finish time
	01.10.2015	22:00:00	22.10.2015	22:00:00
Number	Name	Quantity	Value	% Value
16	Desserts	1167	1.960,60 €	3,147%
17	Starters	1948	5.092,71 €	8,175%
22	Mains	13801	55.241,26 €	88,677%
<b>Total</b>		<b>16916</b>	<b>62.294,57 €</b>	<b>100,000%</b>

# TRIED-AND-TESTED FUNCTIONS

## Everything for the Hospitality Sector

Vectron POS systems offer lots of features that simplify daily work for you and your staff:

- Time and attendance at the POS system
- Fast and secure logging in or out of operators using magnetic locks
- Individual user rights
- Graphical table maps
- Transferring, splitting and allocating tables
- Message system: send notifications to operators from headquarters
- Ability to switch the VAT rate for in-house and takeaway sales
- Multiple price levels per PLU
- Time-controlled price changes (e.g. happy hour)
- Ability to enter additional handwritten information
- Cashing up: individual accounting per operator with their own drawer, shift accounting
- Automatic data backups on a USB stick or SD card
- Journal evaluations
- Performance monitor: Sales in relation to the personnel requirements in real time and much more.

Collecting payments is child's play and your sales personnel have more time to expertly advise guests. A practical feature is the uniform operation of all POS models and even the PC software.

## PROVIDING INFORMATION ON ALLERGENS

Ingredients can be listed, filtered and printed where required. Filtered criteria, which you have defined yourself, can be saved to the POS system for this purpose e.g. "vegetarian" or "halal". The filter "from 18 years old" is also useful in many branches. The stored information can be displayed as "competence text" on the POS system, as a service for guests on the customer display or even printed on the receipt.

## INTELLIGENT RESERVATION SYSTEM

### Never again experience reservation chaos!

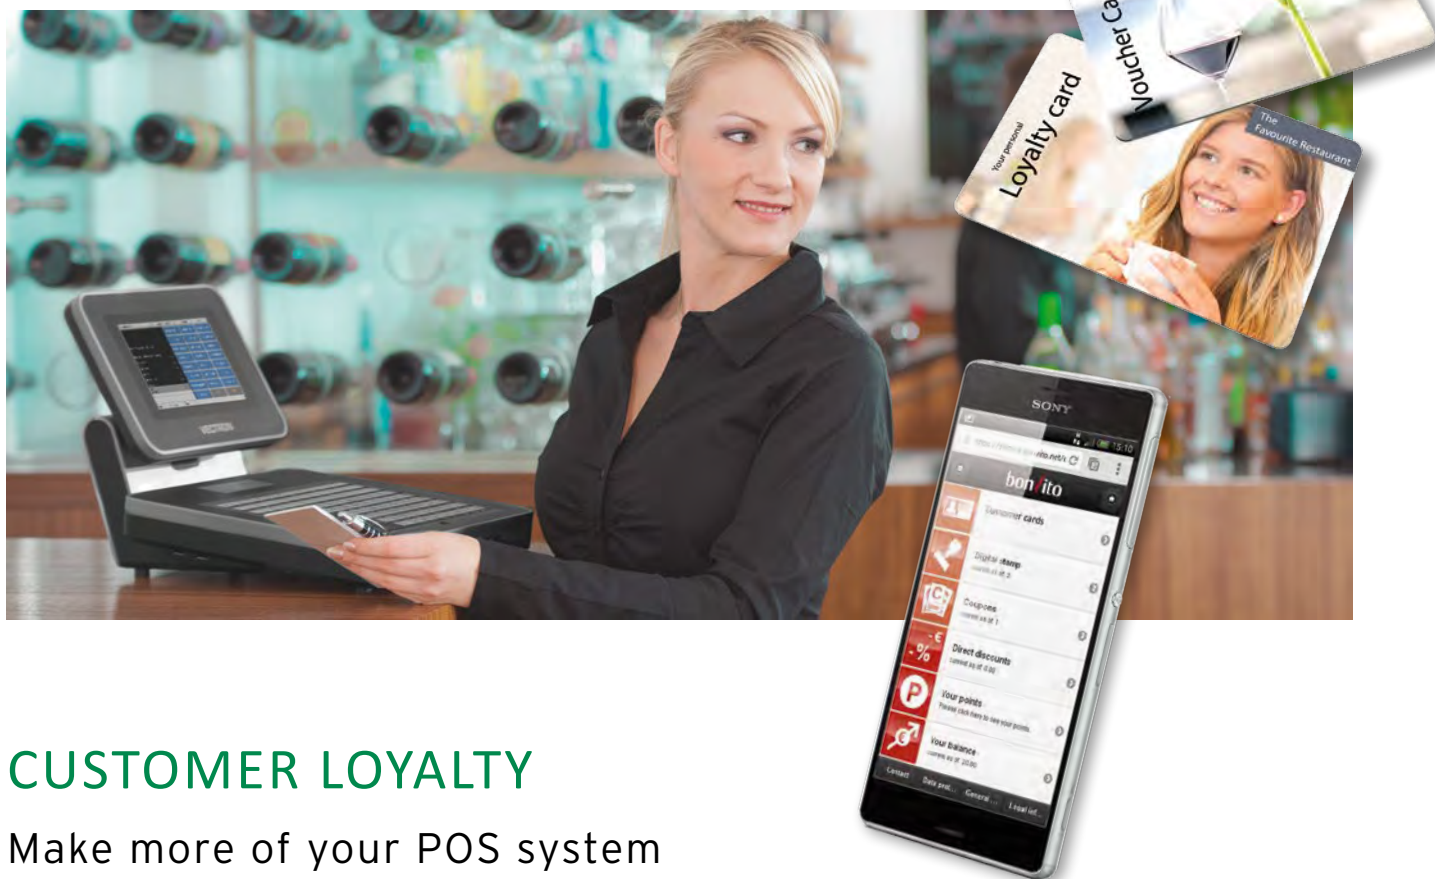

Our unique web-based reservation system from bonVito provides you with deal support because it is directly integrated into the POS system and automatically manages all reservations centrally.

You enter reservations taken in person or by telephone online in the central reservation book, while reservations from your website can also be automatically entered there if desired. At the same time, already reserved tables or those currently open on the POS system are automatically blocked for online reservations. Your guests are thus able to make reservations 24/7 without you having to keep a special contingent of tables free for this purpose. You thus constantly retain a complete overview of the actual situation with regards to occupancy and

reservations from all channels. You can also view precisely what your guests have eaten and drunk at any time at a later date because the integrated and clearly structured guest database not only stores the name and e-mail addresses of your guests - which are ideal for use with targeted marketing campaigns - but it also shows you on a PLU-by-PLU basis what a guest consumed, the invoiced amount and when and how often the guests visit your business.

You get to learn the individual preferences of your guests and can clearly anticipate their every need.

## CUSTOMER LOYALTY

### Make more of your POS system

Why not use your Vectron POS system to easily increase customer loyalty. bonVito, our unique web-based marketing tool, can be directly integrated into the POS system. You achieve more sales and profit, constantly have an overview of your costs and the results of your campaigns and actively increase customer loyalty for your business.

Freely select the right modules for you:

- Customer cards (registrable or anonymous)
- Payment & gift cards
- Digital stamps
- Coupons
- Collect points
- Direct discounts
- And much more

#### SET UP INDIVIDUAL OFFERS ONLINE

Conveniently set up individual sales campaigns - "You receive 10 points for every €1 spent on our cocktails" (points campaign) - online and send them to (selected) POS systems.

#### AUTOMATED ADMINISTRATION OF GIFT VOUCHERS

Gift vouchers are a popular gift. Your individual gift cards only need to be scanned into the system in order to book the desired amount to them with bonVito. The amounts are directly saved in the system so that you

no longer have to maintain a manual gift voucher book. The gift card simply needs to be scanned when it is being redeemed in order to debit the amount from the credit balance. The remaining balance is saved in the system. In addition, you can see how many gift vouchers have been issued and what (remaining) balance is in circulation online or in an exportable voucher book.

#### REAL-TIME MONITORING OF THE CAMPAIGNS

You can maintain an overview of all important details about your customer loyalty campaigns - at a PLU and customer level - thanks to the comprehensive evaluation functions. You can thus see the precise costs and success of every single campaign.

## ATTRACT CUSTOMERS

What should you do if your guests stay away on Mondays? The answer is simple: Use coupons to attract customers on those day with low sales. Print coupons on all of your receipts that are only valid on those days with low sales. Your customers will then return to use the discount and keep your business busy. Best of all: You alone decide the level of the discount and the products for which the coupon is valid. A unique barcode also prevents any misuse.

# MOBILE POS SYSTEMS

## Walk less, earn more

Mobile POS systems are now an integral feature of the hospitality sector. They speed up the process of taking orders, increase turnover and reduce the number of staff required. All orders entered into the system are automatically sent to selected receipt printers. And while the waiter continues to serve customers, the orders are already being prepared in the kitchen and at the bar. You can choose between our robust professional waiter-based POS system or the Vectron MobileApp for Android and iOS smartphones, which is charged on a monthly basis.

In addition, the mobile POS MobilePro III is also the perfect choice as a stand-alone POS system for sales vehicles and mobile sales stands.

## OUR SERVICE

### Always there for you

Vectron products are distributed via a close-knit network of qualified specialist trade partners with many years experience in the hospitality sector. This guarantees the provision of expert advice, individual solutions and reliable service provision on-site. Every minute the POS system is broken down ultimately costs money! The service provided by our reliable specialist trading partners offers you lots of advantages:

- Tailor-made systems and programming adapted to your requirements
- Expert installations
- Professional training
- Technical support and expert advice
- 24/7 reliable customer service and emergency assistance
- Hotline support and remote maintenance options
